

Savannah Resources PLC (“Savannah”) is a mineral exploration company listed on the London AIM stock exchange (AIM: SAV) and is developing a lithium project in Barroso region.

The purpose of Savannah’s newsletter is to provide the communities surrounding the project with information about the work completed and planned by the company. You can find the previous editions on the Savannah’s website section dedicated to community (<http://www.savannahresources.com/community/portugal/>).

This newsletter is designed to help promote two-way communication between the company and the community. Therefore, if there are any specific questions which you would like to have answered please contact us at [community@savannahresources.com](mailto:community@savannahresources.com) and we will endeavour to answer the question in a future edition of the newsletter or, if more urgent, directly with you.

### **What happened**

Exploration works have continued in June, with drilling in the Aldeia & Irmãos area (block A), in the parish of Canedo. Samples from the exploration drilling were also prepared and sent to the laboratory.

At the area of NOA a blast for ore extraction was completed with the material transported off site to be use in the ceramic industry. We took this opportunity to arrange vibration measurements before and during the blast and during the mine works. These measurements are part of the work of the Environmental Impact Assessment.

We were also delighted to receive the visit of His Excellency Mr. Christopher Sainty, the Ambassador of the United Kingdom, who visited to get to know our project and had the opportunity to see the works that is being developed.

## What is happening

At this moment, the drilling works are temporarily stopped. We are waiting to receive all the results of the samples sent to the laboratory, which will allow us to review of the exploration works that will be necessary to develop in the coming months.

We are also working with the material collected in drilling carried out so far, both in terms of description and characterization of the rocks and in preparation of the samples to be sent to the laboratory.

We continue to carry out the assessment of results of the analyses that we are receiving, of the samples already sent to the laboratory.

The Environmental Impact Assessment works continue to be developed, and we continue to make every effort to design infrastructure and processes that will eliminate/mitigate the potential impacts that the mine may cause.

We continue to develop works to design the project so that it becomes feasible, integrates in the environment where it will develop, both at the environmental and landscape level and at the social level.

At the NOA area, the ore continues to be mined and shipped regularly for use in the ceramics industry.

## Planned activities

In the Information Centre, new posters will soon be available to show the differences expected in certain areas, with the temporal evolution, crushing and mill installations, among others. Visit us!

We are also planning the future exploration works, namely the drilling for a better delineation of mineral resources, geotechnical characterization of rock material from mine areas and collection of mineralisation for further testing to improve mineral processing.

### Where to find more information

There is further information on the Savannah website in the dedicated community section, the website can be found at [www.savannahresources.com](http://www.savannahresources.com). If you have a specific question or query, please send an email to [community@savannahresources.com](mailto:community@savannahresources.com) as we will endeavour to answer your question as soon as we are able.

If you would like to visit the site to see any of the operations or have any other questions we will be more than happy to meet and answer questions. Savannah has a dedicated community relations officer, Marta Fernandez who is available to discuss the project with the community. Marta can be contacted on 917599130.
